<tr>
<td>Intervention - Aim 2</td>
<td>During the intervention period, staff will capture women during the first well-baby visit (WBV) and offer to have the next visit co-scheduled for infant and contraception care. Appointments are scheduled during the discharge process at the end of each WBV. During the discharge process all women 0-6 months postpartum will be identified by clerical staff through review of each pediatric clinic beforehand and through an electronic flag alert in the infant's electronic medical record. The pre-review of pediatric clinic schedules and the use of the flag will remind staff to offer the mother a co-scheduled visit for newborn and contraceptive care at the time of the next newborn visit.</td>
